

PRODUCT SAFETY POLICY

K&S Aerospace Components Ltd manufacture and repair both critical and commercial products for our customers. We are dedicated to supplying products of a high standard and our commitment to Product Safety is paramount.

We have set principles that help us continually improve our approach to Product Safety.

Accountability

We ensure that all the required time and resources are available to all the safety related processes. All our employees are briefed and trained on any safety related procedures as they arise. They are aware of the importance of their personal responsibility towards product safety and what they are accountable for.

Continual Improvement

The safety of our products relies on the applications of our safety processes. Our commitment to safety is reflected throughout the company. We ensure all industry standards are met. We encourage our employees to report any product safety concerns that may arise, we can guarantee that no punitive action will result from safety reporting. We have a consistent approach to product safety, by sharing ideas and best practices we adapt to improve.

Conforming Products

Quality is a key part of Product Safety. We have established procedures in place for raw material certifications, external process conformance and product validation. We ensure that we only use external suppliers that have the correct approvals and that can offer full traceability where required. We have processes in place for internal and external testing inspections that lead up to the release approval process.

Product Safety Performance

For safety critical products we review our safety performance alongside our KPI'S each month by NCR'S that are related to safety critical product.

Kenny Hatch
