

ENVIRONMENTAL POLICY

K&S Aerospace Components Ltd are fully committed to protecting the environment and we are continually looking for new ways to improve the environmental performance of all our trading activities.

We encourage environmental protection through partnership with both our suppliers and customers, as we understand that our environmental influence extends beyond our site.

Our aims are to prevent pollution, reduce carbon emissions, minimise the consumption of resources, cut down waste and increase the amount of environmentally friendly products we buy.

We will consider and understand the implications to the environment whilst sustaining a high standard of customer service. We will take practical steps to ensure that we prevent further and possible pollution. In addition to this, we will ensure that our employees are educated, trained and motivated to carry out their tasks in an environmentally responsible manner.

We will ensure that we comply with legislative and other requirements applicable to our business, and the industry requirements within which we operate, and continually strive to reduce our environmental footprint wherever possible.

K&S Aerospace Components Ltd is committed to continual improvement of our environmental performance. We believe we have a duty to run our business in a socially and environmentally responsible way on behalf of customers, employees and residents.

This Policy will be communicated to all employees, contractors and suppliers, and be publicly available.
